# ECLIPSE EGGS

An eclipse happens when a planet or a moon gets in the way of the sun's light. On Earth, we can experience two kinds of eclipses: solar eclipses and lunar eclipses. A solar eclipse happens when the moon passes in front of the sun and casts its shadow on Earth, making it dark during the day. During a lunar eclipse, Earth gets in the way of the sun's light hitting the moon. That means that during a lunar eclipse, the moon will fade away from view as Earth's shadow covers it up.

Answer: When eggs tell jokes, are they called yolks?

## DID YOU KNOW?

This month celebrate School Breakfast Week in Texas by starting each day with healthy Texas foods. School Breakfast Week is a great time to try foods from farms and ranches in every part of the state! There are almost 250,000 farms and ranches in Texas and that is more than any other state.

Eggs, milk, lean meat, fruit, vegetables, and whole grains can all be part of a good breakfast and they're all produced right here in Texas. Eggs are an "egg-cellent" source of choline, a nutrient your entire body needs to grow!
